Postdoctoral Position in Marine Microbiology

The **Kranzler Lab** is seeking an engaged and motivated postdoctoral candidate in the field of marine microbiology. This exciting new research project funded by the ERC aims to advance our understanding of the underlying factors that shape microscale interactions across diverse environments in the ocean. Successful candidates will focus on host-virus interactions in diatoms – a prevalent and biogeochemically critical group of marine phytoplankton. Research will rely upon a combination of field sampling and lab-based experimental work, incorporating physiological, biogeochemical and molecular, omics-based techniques including the development and application of single cell-based approaches.
